PART NUMBER	NSN
294E249G12	4710-01-256-2955

The GCU Tube Assembly serves as the backbone/casing of the generator itself and several additional components. 30 years ago, the US Navy did not foresee a need to stock list this Tube Assembly; but in 2010, Naval Engineers realized the value of procuring this component. Prior to that point, a broken Tube Assy meant full-scale replacement of the entire GCU. Now, thanks to Aero Precision's support, the US Navy is saving several million dollars by replacing the flanged tubes instead of the entire GCU.

Basic Data:

- Part Number 294E249G12
- NSN - 4710-01-256-2955
- Unit Name – Generator Convertor Unit (GCU)
FlangedTube Assembly
- OEM – General Electric

Next Higher Assembly:

- Part Number 293E775G40
- NSN – 4710-LL-NDO-8843
- Unit Name – Generator Convertor Unit

US GOVT Contracts awarded to Aero Precision:

- N00244-10-C-0008
- N00244-11-C-0041
